

Ultimaker 3 3D Printer's SD Card Reader

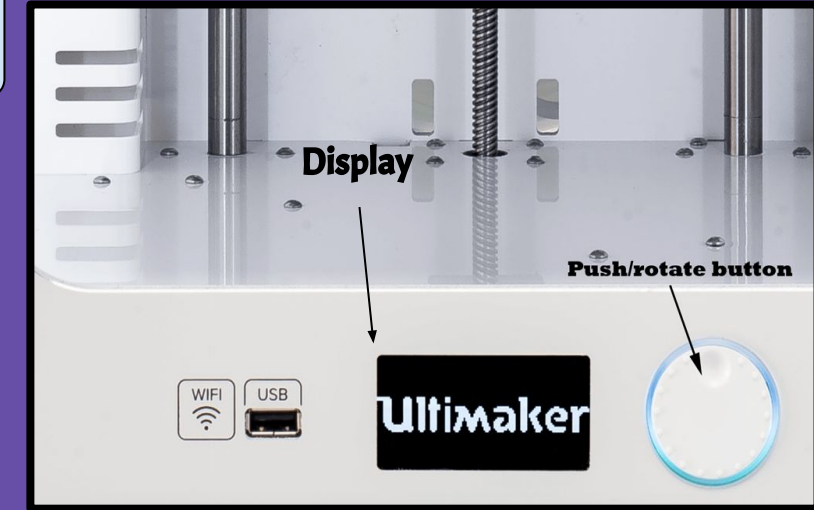

First, the .gcode file is downloaded onto an SD card.

Next, the SD card is plugged into the 3D printer's card reader.

Afterwards, the user picks the file by using the screen and dial to the right of the screen.

After the file is selected, the SD card reader and main operating system start to instruct the printer as to how the file is supposed to be printed and the 3D printer follows the instructions, creating a model out of the .gcode file.
